

What is an organic mattress?

It's a mattress made from the very best Mother Nature has to offer:

Certified organic cotton

Premium Eco-Wool¹

100% natural rubber latex from a rubber tree (that is not blended with synthetic man-made latex)

It is free of toxic chemicals found in conventional mattresses:

Formaldehyde²

Fire retardants: PBDEs³, Boric Acid, antimony ...

It does not off-gas harmful VOCs⁴ like conventional mattresses do:

Propylene glycol, tetrachloroethylene, ...

3-methylheptane, tridecane, undecane, ...

Natural rubber latex is a habitat to which dust mites are averse

Dust mites are the #1 trigger of asthma attacks

It's also antimicrobial (anti-mold, mildew, and bacteria)

Eco-wool is naturally flame resistant and easily wicks away moisture

The Rejuvenator:

An innerspring made from certified organic cotton, premium Eco-Wool and two layers of 100% natural rubber latex on each side.

1. Premium Eco-Wool is humanely sheared from sheep raised (in California) under strict guidelines to eliminate chemical contamination.
2. Formaldehyde is a known allergenic and carcinogen. <http://en.wikipedia.org/wiki/Formaldehyde>
3. PBDE (polybrominated diphenyl ether) is now a known bio-accumulator, showing up in mother's milk, and linked to brain and thyroid problems in test animals; Americans have 10 times the levels of non-UK Europeans http://pubs.acs.org/subscribe/journals/esthag-w/2003/apr/science/kb_pbde.html
4. Many Volatile Organic Compounds (VOCs) off-gassed from traditional mattresses are considered possible carcinogens, including tetrachloroethylene.
